Software Pricing Policies

Responsive Systems, a leading provider of specialty tuning solutions for DB2 for z/OS publishes the following pricing policy for all software products:

Upgrading your processing environment

We do not have upgrade charges, or charge any client an upgrade fee for increasing the processing power of any licensed machine - for machine licenses, or complex for clients that have a site, enterprise, or global license. Annual maintenance and renewal fees will be based on the license value of the software on the processor(s) where it is licensed at the time of renewal, or upon the value of the site, enterprise, or global license.

There is no upgrade fee for moving to a larger or more powerful machine.

Upgrading from a site to a multi-site, or from a site license to an enterprise license, or from an enterprise license to a global license may have additional charges.

Pricing Basis

Buffer Pool Tool® for DB2, and Buffer Pool Optimizer™ are priced using an MSU based formula.

DIFF™ has a flat initial charge that is not based on machine capacity. It is based upon a percentage value of the existing Buffer Pool Tool License value.
