# Buffer Pool Tool® for DB2
Wins Again!!

A recent quote by an analyst at a client site, comparing the IBM Buffer Pool Analyzer to their already licensed Buffer Pool Tool software.

"I ran a collection using the IBM Buffer Pool Analyzer as well as your tool for the same time period on the same day (11-16-05 11:00am). I then ran the job for each to create the report and PC file.   I was shocked at the CPU cost and run time differences between the two:
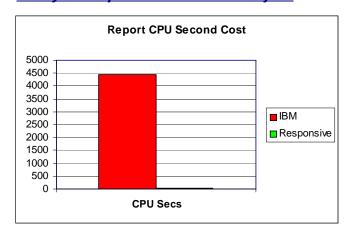

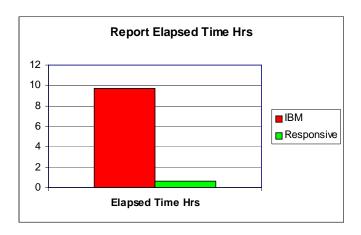

Collection Job:

Collection CPU Seconds

The total cost of running your two *Buffer Pool Tool* jobs is about $75, and took 70 minutes to run.

IBM cost almost $3,000, and took more than 10 hours! "

Analysis Report/PC file creation job:

Report CPU Second Cost

Report Elapsed Time Hrs

Responsive Systems can provide many client references you can speak with, who will discuss their measured performance improvements and cost savings from using the Buffer Pool Tool.
